Dr. Tetsuo Iino  
National Institute of Genetics  
Yata IIII  
Sizuoka-Ken  
Misima, Japan

Dear Tetsuo:

I was very much interested to hear the results in your letter of July 10, even though they deviate from the original intention of the phenol experiment. It will be important to develop a quantitative assay for the flagellins.

(I assume you permuted  $enx/a$  in P. 2 (2)).

Your hypothesis seems a very exciting and reasonable one, and I am looking forward to discussing the latest details with you.

How is the review coming along?

It is delightful to hear that Kumiko may join you. We have reserved a dormitory room (in Stern Hall) as you asked; also, Friday, September 14, at 4 p.m. for your lecture. Would you like to specify a title?

With best regards,

As ever,

Joshua Lederberg  
Professor of Genetics

P.S. May I ask a small favor? If the Canon shop in Misima has it, I would like very much to have the sunshade accessory and the ordinary protective, opaque lens cap for the Canon Zoom 8EEE. We have had wonderful fun with that camera and I know you will enjoy seeing the many accumulated pictures.
